2019 Computing Science

Advanced Higher

Finalised Marking Instructions

© Scottish Qualifications Authority 2019

These marking instructions have been prepared by examination teams for use by SQA appointed markers when marking external course assessments.

The information in this document may be reproduced in support of SQA qualifications only on a non-commercial basis. If it is reproduced, SQA must be clearly acknowledged as the source. If it is to be reproduced for any other purpose, written permission must be obtained from permissions@sqa.org.uk.

General marking principles for Advanced Higher Computing Science

This information is provided to help you understand the general principles you must apply when marking candidate responses to questions in this paper. These principles must be read in conjunction with the detailed marking instructions, which identify the key features required in candidate responses.

- (a) Marks for each candidate response must **always** be assigned in line with these general marking principles and the detailed marking instructions for this assessment.
- (b) Marking should always be positive. This means that, for each candidate response, marks are accumulated for the demonstration of relevant skills, knowledge and understanding: they are not deducted from a maximum on the basis of errors or omissions.
- (c) If a specific candidate response does not seem to be covered by either the principles or detailed marking instructions, and you are uncertain how to assess it, you must seek guidance from your Team Leader.
- (d) Marks should be awarded regardless of spelling as long as the meaning is unambiguous.
- (e) Candidates may answer programming questions in any appropriate programming language or pseudocode. Marks should be awarded, regardless of minor syntax errors, as long as the intention of the coding is clear.
- (f) Where a question asks the candidate to **describe**, the candidate must provide a statement or structure of characteristics and/or features. This should be more than an outline or a list. It may refer to, for instance, a concept, process, experiment, situation or facts in the context of, and appropriate to, the question. The candidates will normally be required to make the same number of factual/appropriate points as there are marks available for the question.
- (g) Where a question asks the candidate to **explain**, marks should only be awarded where the candidate goes beyond a description, for example by giving a reason, or relating cause to effect, or providing a relationship between two aspects. These will be related to the context of the question or a specific area within a question.
- (h) Credit should be given where a labelled diagram conveys clearly and correctly the response required by the question.

Marking instructions for each question

Question			Expected response	Max mark	Additional guidance
1.	(a)		<pre> CLASS WorkMeeting INHERITS Event WITH { STRING meetingTitle, REAL mileage, REAL travelExpenses } </pre>	2	<p>1 mark for class declaration indicating use of inheritance</p> <p>1 mark for additional attributes; only award mark for nine attributes if no inheritance indicated</p>
	(b)		The constructor assigns initial values upon instantiation of an object.	1	Description must mention creation/instantiation of an object.
	(c)	(i)	<p>A new object of the <code>WorkMeeting</code> subclass has been instantiated (1 mark)</p> <p>The values are assigned to the relevant instance variables with the constructor initialising an empty array to store the list of participants and initialising the array index as zero (1 mark)</p>	2	<p>Award 1 mark each for 2 of the following:</p> <ul style="list-style-type: none"> instantiation/creation of object <u>or</u> invoke constructor method for <code>WorkMeeting</code> class assignment using the 7 values provided and additional two attributes of <code>Event</code> class
		(ii)	<p>Award 1 mark each for any two of the following:</p> <ul style="list-style-type: none"> A new participant called Chao Li has been added to the array of meeting participants and the array index is incremented Invoke <code>addParticipants()</code> method 	2	
		(iii)	<p>Encapsulation means that a property cannot be edited directly. (1 mark)</p> <p>A method needs to exist in order to update the venue property. (1 mark)</p>	2	<p>1 mark for encapsulation/private variable</p> <p>1 mark for need for method</p>

Question			Expected response	Max mark	Additional guidance
	(d)	(i)	SET THIS.travelExpenses TO THIS.mileage * 0.5	1	1 mark for correct calculation Note: use of THIS is not mandatory
		(ii)	FOR i FROM 0 TO 99 DO IF (myMeetings2019[i].getDate()) >= "01/04/2019") AND (myMeetings2019[i].getDate()) <= "30/04/2019") THEN SET THIS.expenses TO THIS.expenses + myMeetings2019[i].getTravel Expenses() END IF END FOR	3	1 mark for correct use of getDate() and getTravelExpenses() methods of the array of objects 1 mark for correct condition 1 mark for updating running total using myMeetings2019 array Note: accept calculateTravelExpenses() method rather than getTravelExpenses() method Note: alternative methods for finding dates in April are acceptable eg use of substring
	(e)		Increase in energy used to process users' data in the company data centre leading to increased carbon emissions. Need to use low carbon or energy efficient equipment in the company data centre to reduce carbon emissions needed to run the devices.	2	1 mark each Note: answers must refer to environmental impact.

Question			Expected response	Max mark	Additional guidance
2.	(a)		<FORM action="form1.php" method="post">	2	1 mark for action 1 mark for method
	(b)		<pre>CREATE TABLE Tour (tourID int AUTO_INCREMENT PRIMARY KEY; fullName varchar(20) NOT NULL; contactNo varchar(11) NOT NULL; tripDate date NOT NULL; tripTime time NOT NULL; guideID int; FOREIGN KEY (guideID) REFERENCES Guide(guideID));</pre>	3	1 mark for primary key with auto increment and correct data type 1 mark for additional 5 fields with correct data types 1 mark for foreign key guideID
	(c)	(i)	<pre>SELECT guideID AS [Guide ID], COUNT(*) AS [Number of Tours] FROM Tour WHERE tripDate = "16/04/2019" GROUP BY guideID;</pre>	2	1 mark for correct fields with WHERE clause 1 mark for correct use of COUNT and correct grouping Note: field names should match those introduced in the CREATE statement in part (b) Note: use of aliases is not mandatory
		(ii)	<pre>SELECT MAX([Number of Tours]) FROM ci;</pre>	2	1 mark for use of MAX 1 mark for correct use made of (c)(i) query

Question			Expected response	Max mark	Additional guidance
	(d)	(i)	6.1 \$servername="ice1"; 6.2 \$username="u1"; 6.3 \$password="p1"; 6.4 \$database="facilityTour"; 7.1 \$conn = mysqli_connect (\$servername, \$username, \$password, \$database);	2	1 mark for assignment of data values to connection variables 1 mark for connection code Note: accept mysqli_connect without \$conn variable
		(ii)	\$sql = "INSERT INTO Tour (fullName, contactNo, tripDate, tripTime, guideID) VALUES (\$fullname, \$contact, \$date, \$time, \$guideID)"; mysqli_query(\$conn, \$sql);	3	1 mark for INSERT query with values in same sequence as fields 1 mark for correct fields (tourID should not be listed) 1 mark for execution of query
	(e)		For example: <ul style="list-style-type: none"> • Need to gain the necessary agreement/consent of customers whose data is gathered - without this the company is in breach of GDPR • The company must own IPR all of media used in promotional materials - without this the company is in breach of Copyright, Design and Patents Act 	1	1 mark for any valid concern

Question			Expected response	Max mark	Additional guidance
3.	(a)	(i)	<p>Having identified that towel B432 is out of place, the insertion sort algorithm:</p> <ul style="list-style-type: none"> works backwards down the array to identify the correct insertion position towel B432 is copied and the towels from the insertion point upwards move one position to the right towel B432 is then inserted into the correct position in the array <p>Alternatively</p> <ul style="list-style-type: none"> compares towel B432 with towel F411 and swaps them compares towel B432 with towel F127 and swaps them compares towel B432 with towel B224 and doesn't swap then because they are in the correct sequence and towel B432 is now in the correct position in the array 	3	<p>1 mark each for the following:</p> <ul style="list-style-type: none"> indication of working backwards from towel B432 to the insertion point terminating the backwards comparisons once towel B432 has been positioned correctly <p>1 mark for <u>either</u> of the following:</p> <ul style="list-style-type: none"> swapping towel B432 with previous elements of the array copying towel B432, moving elements with larger values to the right and then inserting towel B432 in the correct position <p>Note: marks can be allocated to relevant lines of responses that are presented as an algorithm; to receive full marks, the algorithm <u>must</u> refer to the scenario (eg make use of towel B432)</p>
		(ii)	<p>7.1 if middle element of towelID array = towelIDtoFind then</p> <p>7.2 set found to true</p> <p>7.3 else if middle element of towelID array < towelIDtoFind then</p> <p>7.4 set startPointer TO middle+1</p> <p>7.5 else</p> <p>7.6 set endPointer TO middle-1</p> <p>7.7 end if</p>	3	<p>1 mark for each correct comparison and output</p> <p>Note: middle must be used as an array index and not a comparatpr</p> <p>Note: 3 separate IF statements are also acceptable</p>
		(iii) A	Recursion	1	
		(iii) B	<p>The values of the first 3 elements in the quantity array are totalled.</p> <p>The array index is reduced each time the function is called until the base case is reached.</p>	2	<p>1 mark for totalling the quantity of towels</p> <p>1 mark for explanation of how recursion is used to achieve a total of 161</p>

Question			Expected response	Max mark	Additional guidance
3.	(b)		1. if queue is full then 2. display queue full message 3. else 4. add towelID to queue 5. set rearPointer to rearPointer +1 6. end if	3	1 mark for checking for queue overflow 1 mark for adding data 1 mark for increasing pointer
	(c)		The null pointer on the last node of the linked list is replaced with address of the new node, 147. A new node is created to store the data (H128, Hand, 4, 99, 200) which has the pointer value NULL.	2	1 mark for each point Note: use of a diagram illustrating updating of pointers and use of additional node is acceptable alternative to complete description
	(d)		Company staff would use the software and provide feedback to the developers on any issues that arise.	1	1 mark for use by end users with feedback

Question			Expected response	Max mark	Additional guidance
4.	(a)		<pre> graph TD GP[general public] RU[registered user] SP[secure payment] BD[booking DB] L((login)) EB((edit booking)) CB((cancel booking)) CA((check availability)) MB((make booking)) MP((make payment)) RU --> L L --> EB EB --> CB CB --> CA CA --> MB MB --> MP GP --> CA SP --> MP BD --> EB BD --> CB </pre>	3	<p>1 mark for (at least) 2 correct actors</p> <p>1 mark for 6 use cases with interactions</p> <p>1 mark for appropriate use made of inheritance, extends or includes (between actors or use cases)</p> <p>OR</p> <p>1 mark for appropriate extra actor</p>
	(b)	(i)	<pre> RECORD seatInfo {STRING name, STRING contactNumber, REAL cost, BOOLEAN sold} </pre>	1	1 mark for record structure
		(ii)	<pre> DECLARE seatingPlan AS ARRAY OF ARRAY OF seatInfo INITIALLY [[]] <with 13 rows and 4 columns> </pre>	1	<p>1 mark for correct 2D array of seatInfo records</p> <p>Note: dimensions [12][3] are also acceptable</p>
	(c)		<pre> 1. loop for rows 0 TO 12 2. loop for columns 0 TO 3 3. if (column = 2 or column = 3) 4. AND (row = 5 or row = 6) then 5. set seatingPlan[row][column] 6. to seatInfo ("Toilet", "Null", 7. 0.00, TRUE) 8. else 9. set seatingPlan[row][column] 10. to seatInfo ("Empty", "Null", 11. 0.00, FALSE) 12. end if 13. end column loop 14. end row loop </pre>	3	<p>1 mark for correct loops to process the 2D array</p> <p>1 mark for correctly initialising seats</p> <p>1 mark for correctly initialising toilets</p> <p>Note: initialisation should make use of record structure that forms each element of the 2D array</p>

Question		Expected response	Max mark	Additional guidance
4.	(d)	<pre> SET freeSeatFound TO FALSE SET column TO 0 SET row TO 0 SET ticketPrice TO 0.00 // Check if seat available REPEAT UNTIL freeSeatFound = TRUE OR (column = 4 AND row = 13) IF seatingPlan[row] [column].sold = FALSE THEN SET freeSeatFound TO TRUE SET rowFound TO row SET columnFound TO column END IF IF column < 3 THEN SET column TO column + 1 ELSE SET column TO 0 SET row TO row + 1 END IF END REPEAT // Offer seat to customer IF freeSeatFound = TRUE THEN IF rowFound >=0 AND rowFound <=4 THEN SET ticketPrice TO 22.50 ELSE IF rowFound >=11 AND rowFound <=12 THEN SET ticketPrice TO 75.00 ELSE SET ticketPrice TO 45.00 END IF SEND "The ticket price is " & ticketPrice & " proceed with order?" TO DISPLAY RECEIVE answer FROM KEYBOARD IF answer = <YES> THEN <store user data and price to record and update sold field of the record> END IF ELSE SEND "No seats left" TO DISPLAY END IF </pre>	5	<p>1 mark for checking next available seat</p> <p>1 mark for correct use of 2D array</p> <p>1 mark calculating correct cost</p> <p>1 mark for</p> <ul style="list-style-type: none"> • asking user to proceed • updating array with correct details <p>1 mark for</p> <ul style="list-style-type: none"> • correctly displaying not available • displaying cost of first available seat <p>Note: accept assumption stating that prices have already been assigned rather than code/ pseudocode showing the assignment of prices</p>

Question			Expected response	Max mark	Additional guidance
4.	(e)		<ul style="list-style-type: none"> • One thread checks for availability but before it allocates the seat, another thread does the same - which results in a double-booking • Even if only 1 seat was available, 2 people would believe they have a seat, however the system would have overwritten the final seat allocation • Potential for over-booking the coach 	1	1 mark for any bullet
	(f)		<p>Adaptive maintenance.</p> <p>Booking management software will need to be adapted to be compatible with platform/device</p>	1	1 mark for adaptive with description

[END OF MARKING INSTRUCTIONS]
